

AiosynQC AI-powered quality control

AiosynQC provides an AI-powered solution to identify the most common artifacts in the scanning process of whole slide images.

Improve the quality and speed of digital pathology workflows with **AiosynQC**

NOW
COMPATIBLE
WITH
IHC SLIDES!

Quality of diagnostics process

The quality of the diagnostic process is at the heart of any pathology laboratory and only the best quality images need to be used for clinical diagnostics. Histology slides are heterogeneous because of the differences in the pre-analytical process. Therefore, there is a need to scan for artifacts before the diagnostic procedure. AiosynQC helps labs ensure that only high-quality images are used by pathologists for clinical diagnostics.

Efficiency of the diagnostic and research workflow

Quality control is still a manual process in which technicians are selectively reviewing cases before clinical diagnostics. This is time consuming, repetitive, and labor-intensive for both clinical diagnostics and research. AiosynQC automates these manual checks which saves invaluable technician time and improves the quality and speed of research projects.

Quality in the pathology workflow before clinical-grade algorithms

The number of AI algorithms for clinical tasks is growing rapidly. These algorithms are developed on high-quality data and may underperform on images with artifacts. AiosynQC is therefore a useful tool that improves the workflow and eases the identification of high quality images that could be used as data inputs for separate AI algorithms.

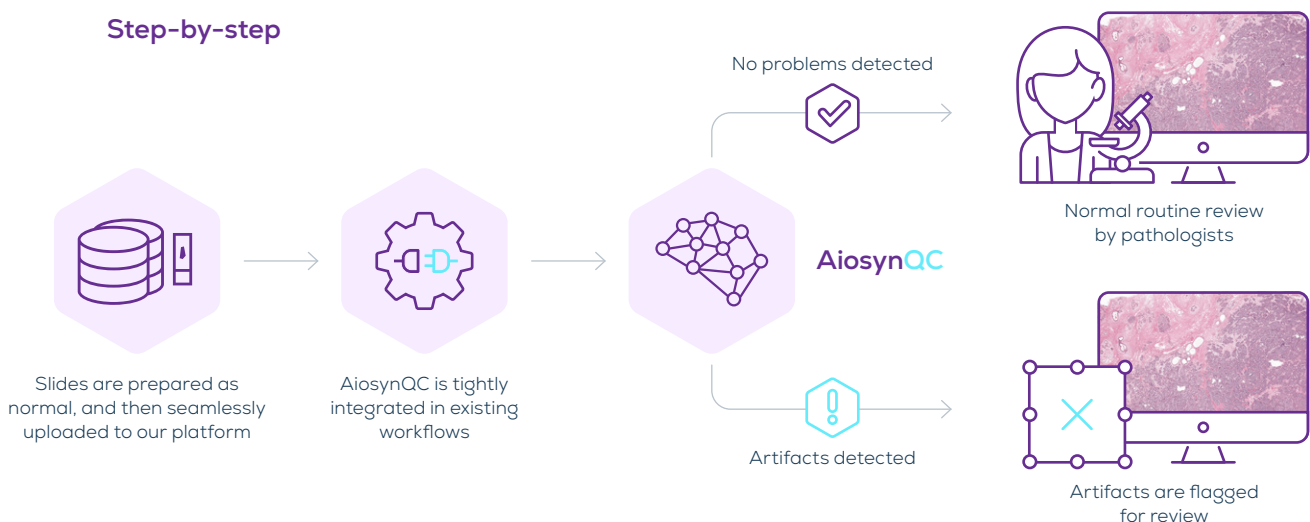

Use of AiosynQC

As part of an improved workflow, AiosynQC helps labs ensure that only high-quality images are used by pathologists for clinical diagnostics and research. Our product flags cases before presentation to a pathologist. The algorithm of AiosynQC detects the most common artifacts in H&E and IHC slides, offering adjustable sensitivity thresholds to meet every lab's requirements and project needs:

The AiosynQC algorithm is not used for, nor does it inform, the process of clinical diagnosis performed by a pathologist, and the pathologist is responsible for ensuring the quality of the image is sufficient and appropriate for use in clinical diagnosis.

Step-by-step

AiosynQC technical specifications:

For a seamless experience, we provide AiosynQC as a service. Our AI solution runs in the cloud within the European Union and the United Kingdom, and can deliver the power of AiosynQC anywhere, anytime. AiosynQC can be integrated with major workflow providers such as Sectra, and it can be installed on-premise as well. Please get in touch with us to know more about the algorithm integration in existing workflows.

Note: AiosynQC is not a medical device, nor is it intended to be used as an accessory to any AI or other medical devices.*
